

# LAMBLI

Available in 10%  
and 20% Glycerol

**15kg**

**A high energy block for  
pregnant ewes.**

## TYPICAL ANALYSIS

### Macro Ingredients

Urea	2%
Bypass Protein Meal	6%
Calcium (Ca)	5.1%
Phosphorus (P)	1.7%
Salt (NaCl)	4%
Magnesium (Mg)	2.6%
Molasses	45%
Liquid Sea Minerals	5%
Glycerol	10%/20%

### Micro Minerals

Selenium (Se)	26mg/kg
---------------	---------

**FOR ANIMAL TREATMENT ONLY.  
THIS PRODUCT DOES NOT CONTAIN  
RESTRICTED ANIMAL MATERIAL.**

**WARNING:** Products containing urea can be toxic to livestock. Please ensure proper farm management practices are employed.

Late pregnant sheep on poor quality dry feed are deficient in glucose precursors, and feed intake is reduced.

The drain of glucose to the developing lamb reduces availability of glucose to the ewe and results in pregnancy toxemia (twin lamb disease).

Olsson's Lambli is a high energy block that supplies glucose to the ewe, assisting in prevention of pregnancy toxemia.

## DIRECTIONS FOR USE

### Feeding Instructions:

For best results feed on an adlib basis year round in conjunction with Peak 50 to maximise production from ewe.

**Pregnant ewes:** 4-6 weeks prior to lambing.

Intake is recommendation only, higher intakes are normally the result of mineral deficiencies.
